The universal mechanical filter cartridge Donner PP10-1 is designed for three-stage filtration.

It removes small impurities from water, such as fine grains of sand, rust. It cleans water from excessive levels of calcium and magnesium. It not only protects equipment from damage, but also health. Clean drinking water is essential for health.

The Donner PP10-1 filter cartridge needs to be replaced regularly - the lifespan of the filter cartridge is individual - it depends on the quality and quantity of consumed water (**most frequently approximately every 6 months**). It is enough to unscrew the filter housing for replacement.

The filters have different permeabilities, it is necessary to choose the appropriate permeability based on the size of the mechanical particles you want to remove from the water.

The higher the value of microns, the fewer impurities the filter will catch and the longer its lifespan will be.

The advantage of Donner PP10-1 filter cartridge is its compatibility with most reverse osmosis and filtration devices.

Key features of the Donner PP10-1 filter insert

- quality certified filtration insert
- sediment cartridge 1 micron
- compatible with most reverse osmosis and filtration devices
- It removes very small impurities from the water
- It removes excessive amounts of calcium and magnesium values.
- regular exchange about every 6 months

Parameters

Basic parameters

Filtering properties:	Water
Content of the package (pcs):	1
Lifespan:	Approximately 6 months
Material:	made of pure polypropylene
Intended for:	most of the reverse osmosis and filtration devices
Warranty:	2
HS code:	42121

Packaging dimensions

Width of the packaging (cm):	25
Height of packaging (cm):	38
Depth of packaging (cm):	10
Weight including packaging (kg):	0.115
